2025 CSC493 – Capstone Weekly Reports[1]

<Download this template and name it Week_<WEEK_NUMBER>, where "<REPORT_NUMBER>" is replaced by the current week number (i.e., "1" for the first weekly report and so forth).

Week	2
Project Name	AI Music Mood Classifier
Report Date	Sep 2, 2025 ← click to select date

Part 1: Weekly Progress Report

- **Accomplishments**: **What did you complete this week?** Be specific and measurable.
- Examples: *Implemented login authentication using OAuth2; Fixed bug in file upload function (issues #14); Completed draft of UI wireframes; Identified functional and non-functional requirements; etc. (up to 3 points)*

This week, I have narrowed down my project choice to just one option. I wrote my initial README, explaining all of the important information related to my project such as the description of the project, the concept of it, the scope of the project (classifying music from audio files into a small set of moods), the vision of the project, the prerequisites (python, pycharm / visual studio, the required python libraries), links to the python libraries and resources that the project will be built with, acknowledgements, and license. Since the concept proposal's first draft and the vision and scope are part of this README, I have completed the initial proposal draft and the vision and scope description.

- **Challenges**: **What problems did you encounter?** Mention blockers, unresolved issues, or risks.
- Examples: *Struggled with connecting database migrations to production server; API documentation was incomplete – need clarification; etc. (up to 3 points)*

I had a challenge that included using ChatGPT this week, I used it for several hours of back-to-back prompting to help me come up with a good study plan for the various python libraries and resources that I will have to use to complete my project and I eventually ran out of prompts for that specific chat, so I had to wait until the next morning at 6:00 AM to get more prompts, but even after 10:00 AM the day the prompts were supposed to open for that chat again, they were still out. I either had to start a new chat and prompt ChatGPT with all of the information gathered from the other chat, or just wait for the chat prompts to come back, which made it difficult to ask it more questions pertaining to gathering information about the necessary libraries, such as YouTubers I could watch that focus on certain libraries, or tutorial PDFs or video series. Ultimately, the chat prompts came back, so I was able to gather more information. I had also had trouble thinking of where to start researching information about the libraries required for my project, but after asking ChatGPT about YouTube tutorials and YouTubers that focus on the libraries and how to use them, I have a good starting catalogue of information that I can learn from.

- **Discussion Points**: **What would you like to discuss in class, or with your professor/TA?** This could include technical issues, project direction, or collaboration concerns.
- Examples: *Should we prioritize front-end features before database scaling? Need guidance on writing integration tests; etc. (up to 2 points)*

[1] Detailed Weekly Report requirements can be found here: 2024 URCPP Capstone - Using Agile and Reporting Out

Should I focus more on the number of samples with a project focused on an AI, or should I focus more on the quality of the samples when training the AI in the future? I was also wondering if there is a requirement for some level of usability with the project by a certain date for presentation purposes.

- **Next Steps**: **<u>What are your goals for next week?</u>** Keep them realistic and linked to project milestones.
- Examples: Set up automated testing with GitHub Actions; Final project proposal *(up to 2 points)*

My goals for next week is to spend at least 8-12 hours studying Youtube tutorials, documentation, and any other forms of learning in order to better understand librosa, pytorch, and other libraries used for data preparation and AI training in order to understand how it works and prepare for extracting basic song information such as tempo, spectrograms, and waveform patterns in order to gather information pertaining to mood to prep for using it to gather information from large datasets.

Part 2: Time Reporting

Make sure that as you fill out the first prompt, you include in enough detail in the summary. For example, "debugging" is vague, but "debugged function X to make sure that when user does action Y, it is called and returns the value Z" is better.

- **Time Spent**: Briefly explain how much time, *outside of class*, spent on your project. If you worked on multiple components, each should get a detailed summary. Make sure to add up all the hours and minutes correctly. *Add as many rows as you need to the table below. Please do not include hours in class as part of this section. (up to 4 points)*

START	FINISH	HOURS	DETAILED SUMMARY
MM/DD HH:MM	MM/DD HH:MM		
8/25 18:00	8/25 20:00	4	Spent a large amount of time gathering information about helpful resources and timeline clarification from ChatGPT.
8/26 08:00	8/26 24:00	4	Spent time both in class and after class on Tuesday gathering resources on tutorial series on YouTube for Pytorch, librosa, scikit, and various other libraries that I will be using for this project. Also spent portion of that time conferring with ChatGPT asking about the possibility of making a website as a GUI for this project instead of making a simple app GUI with TKinter and ultimately decided on using TKinter.
8/27 18:00	8/27 24:00	4	Spent time asking ChatGPT about project scheduling on the timeline, accounting for Thanksgiving break, stretch goals vs non-stretch goals, and ultimately what would be the best way of studying libraries I have never used before in a way that makes my project's scope and concept achievable.
8/28 08:00	8/28 12:00	4	Spent time both in class and out of class on Thursday asking more about the GUI and examples of simple TKinter GUIs that would be simple to implement for my project along with again specifying constraints and what are stretch and non-stretch goals.

	WEEKLY TOTAL	16	This week I have spent a numerous amount of time both in and out of class researching various different tutorial videos and documentation for the different python libraries my project will use, conferring with ChatGPT about stretch goals, feasability of a simple app GUI vs a webpage, timeline streamlining accounting for Thanksgiving break and my lack of knowledge in this area of programming, and finally asking for more clarification on stretch goals pertaining to whether I should focus on mood classification, genre classification, both, and examples of simple TKinter GUI examples.

- **Total (Cumulative) Project Time Spent**: After the number of hours and minutes, make sure to briefly explain whether you are on track and if not, what you may need to do in order to achieve what you set out to accomplish. *(up to 2 points)*

So far, I have spent around 21.75 hours on this project. I am on track so far as I am completing the assignments that are posted within time, and I am on track with my timeline that I have put together using ChatGPT's help.

Rubric:

The following rubric will be used, but they might change as needed.

Accomplishments (3 points)

1 point for a general description of progress, 2 points for specifics on progress, 3 points for specifics AND referring to previous targets and explaining how current accomplishments build on previous ones.

Challenges (3 points)

1 point for mentioning there are roadblocks, 2 points for specifics, 3 points for specifics AND what was done already to try to overcome them.

Desired discussion points (2 points)

1 point for at least one relevant discussion point as a general question, 2 points for relevant discussion points with specifics

Future Goals (2 points)

1 point for concrete future targets (i.e. "working more on the project" is a zero, but "working on getting component X to interface with component Y" suffices), 2 points for tying in the targets with what was hopefully discussed in the meeting.

Time Spent (4 points)

1 point for including general statements of how much time was spent ("4 hours on coding"), 2 points for splitting time into specific parts ("1.5 hours on research on component X, 1 hour coding, 2.5 hours debugging"), 3 points for specific parts and details on the pieces ("1.5 hours researching Turtle interface for drawing concentric circles given inputs from the user, 1 hour coding function X that used that interface, 2.5 hours testing function X by giving it multiple values and fixing errors for values A, B, C, and D"). 1 Point for totalling the hours correctly.

What happens if your time on a task is interrupted and you don't have a concrete (or discrete) end time? In this case put the start time in, and the word "interrupted" for the end time and include the task total time. Rounding to the nearest 15 minutes is acceptable. *(This makes adding up times easier, especially when you use decimal hours, i.e. 3.75 rather than 3 hours 45 minutes.)*

Total (Cumulative) Project Time (2 points)

1 point for summing the values correctly, 2 points for the total time AND reflection on progress (you are confident to fit the target and if not, what course corrections you anticipate needing to make)
