2025 CSC493 – Capstone Weekly Reports[1]

<Download this template and name it Week_<WEEK_NUMBER>, where "<REPORT_NUMBER>" is replaced by the current week number (i.e., "1" for the first weekly report and so forth).

Week	13
Project Name	Moodr AI
Report Date	Nov 18, 2025 ← click to select date

Part 1: Weekly Progress Report

- **Accomplishments**: **What did you complete this week?** Be specific and measurable.
- Examples: *Implemented login authentication using OAuth2; Fixed bug in file upload function (issues #14); Completed draft of UI wireframes; Identified functional and non-functional requirements; etc. (up to 3 points)*

I have finished creating the unit tests within the test suite. I focused on general aspects that needed to be tested, along with various edge cases that required consideration.

- **Challenges**: **What problems did you encounter?** Mention blockers, unresolved issues, or risks.
- Examples: *Struggled with connecting database migrations to production server; API documentation was incomplete – need clarification; etc. (up to 3 points)*

The only challenges that I ran into this week were thinking of edge cases for my project as most of the edge cases that I could think of were already accounted for weeks prior, and actually adding in the unit tests as I tried to create as many important unit tests as I could in order to account for any issues that may pop up when running the program in an unexpected way.

- **Next Steps**: **What are your goals for next week?** Keep them realistic and linked to project milestones.
- Examples: Set up automated testing with GitHub Actions; Final project proposal *(up to 2 points)*

My goals for next week are to refine the GUI, potentially add more weighting or other features to compensate for the lack of angry and calm songs in the dataset, and ensure that everything is polished.

- **Discussion Points**: **What would you like to discuss in class, or with your professor/TA?** This could include technical issues, project direction, or collaboration concerns.
- Examples: *Should we prioritize front-end features before database scaling? Need guidance on writing integration tests; etc. (up to 2 points)*

Some genres, such as metal and ambient music, cause the CNN to misclassify mood directions; should I try to account for genres in order to classify moods more accurately by genre? The CNN inference speed is acceptable on the CPU, but training is slow. Should I enable multi-core usage by the CNN model for faster training?

Part 2: Time Reporting

Make sure that as you fill out the first prompt, you include in enough detail in the summary. For example, "debugging" is vague, but "debugged function X to make sure that when user does action Y, it is called and returns the value Z" is better.

- **Time Spent**: Briefly explain how much time, *outside of class*, spent on your project. If you worked on multiple components, each should get a detailed summary. Make sure to add up all the hours and minutes correctly. *Add as many rows as you need to the table below. Please do not include hours in class as part of this section. (up to 4 points)*

START	FINISH	HOURS	DETAILED SUMMARY
MM/DD HH:MM	MM/DD HH:MM		
11/11 08:00	11/11 14:00	6	I spent 6 hours checking over my codebase and researching test cases for different AI models similar to mine in order to account for any and all edge cases that I hadn't thought of in order to properly create unit tests for them.
11/12 15:00	11/12 21:00	6	I spent another 2 hours checking over small issues that AI sound classifying models have in order to visualize the issues that users might run into if they use the program in an unexpected error in order to properly create unit tests that account for the more rare edge cases. I ultimately found that most of the edge cases have to deal with the format of the music / sound file more than user control, so for user control I simply accounted for users selecting different models and not uploading a file. I spent the remaining 4 hours adding the unit tests and going over my code to make sure that the unit tests did not show issues. Thankfully the unit tests seem to be working and no issues are showing up.
11/13 08:00	11/13 09:00	1	I spent 1 hour confirming that no issues that were accounted for in the unit tests were not resolved already and saw that they were indeed resolved.
11/13 10:00	11/13 14:00	4	I spent 4 hours going over my code in totality to tweak the settings of augmentation and weighting for my CNN model in order to see if any differences with the settings would cause the classification of calm and angry songs to end up more accurate, ultimately the slight changing of values for weighting and augmentation did not really change the classification accuracy.
	WEEKLY TOTAL	17	

- **Total (Cumulative) Project Time Spent**: After the number of hours and minutes, make sure to briefly explain whether you are on track and if not, what you may need to do in order to achieve what you set out to accomplish. *(up to 2 points)*

So far, I have spent 185 hours on this project. I am currently on project as all I have left to do for this project are: better the GUI if needed, add installation.md, and finish the final project video.

Rubric:

The following rubric will be used, but they might change as needed.

Accomplishments (3 points)

1 point for a general description of progress, 2 points for specifics on progress, 3 points for specifics AND referring to previous targets and explaining how current accomplishments build on previous ones.

Challenges (3 points)

1 point for mentioning there are roadblocks, 2 points for specifics, 3 points for specifics AND what was done already to try to overcome them.

Desired discussion points (2 points)

1 point for at least one relevant discussion point as a general question, 2 points for relevant discussion points with specifics

Future Goals (2 points)

1 point for concrete future targets (i.e. "working more on the project" is a zero, but "working on getting component X to interface with component Y" suffices), 2 points for tying in the targets with what was hopefully discussed in the meeting.

Time Spent (4 points)

1 point for including general statements of how much time was spent ("4 hours on coding"), 2 points for splitting time into specific parts ("1.5 hours on research on component X, 1 hour coding, 2.5 hours debugging"), 3 points for specific parts and details on the pieces ("1.5 hours researching Turtle interface for drawing concentric circles given inputs from the user, 1 hour coding function X that used that interface, 2.5 hours testing function X by giving it multiple values and fixing errors for values A, B, C, and D"). 1 Point for totalling the hours correctly.

What happens if your time on a task is interrupted and you don't have a concrete (or discrete) end time? In this case put the start time in, and the word "interrupted" for the end time and include the task total time. Rounding to the nearest 15 minutes is acceptable. *(This makes adding up times easier, especially when you use decimal hours, i.e. 3.75 rather than 3 hours 45 minutes.)*

Total (Cumulative) Project Time (2 points)

1 point for summing the values correctly, 2 points for the total time AND reflection on progress (you are confident to fit the target and if not, what course corrections you anticipate needing to make)
